Subject: RE: EPA permit requirements

Here is what I am envisioning for our first scoping effort. Because we do not know all the required pieces until we calculate the emissions and have an idea of what emission controls will be required, we would start by making emissions calculations and identifying applicable federal requirements so we can confirm with EPA Region 9 that this project can actually be permitted in CA. We can definitely complete portions of the *Application for New Construction* form as part of the this effort (e.g., facility information, emission data, operating schedule). Once we confirm the project is a go from a permitting standpoint, we would then submit a complete application package including the completed form and all the required attachments.

I look forward to today's call and getting everyone's feedback on the best path forward.

Regards,

Chris J. Courtney, PG
